High End Munich 2023 will take place from the 18th to 21st May 2023, at the MOC Event Centre in Munich as usual.

HIGH END MUNICH STARTUPS

START UPS

LINETTE TAKES A LOOK AT THE SPECIAL AREA DEDICATED TO NEW START UPS AT HIGH END AND GIVEN FREE TO PARTICIPANTS BY THE HIGH END SOCIETY

We always cover the Start Up/Newcomers as we see it as the future of the industry, one of the best things is seeing brands that we met on these stands growing and becoming exhibitors in their own right.

By way of encouraging the High End Startups, HiFi Pig has traditionally offered each of the startup exhibitors a free advertisement in the follow up publication and this year is no exception. It's not a lot but it is our way of encouraging the new brands and giving them a bit of a helping hand.

This year's brands are: LUPHONIC LABS, HOUCHMAND, FULIANTY AUDIO, ZLATOUST, BAUSOUND, OPERLY, ARAKAS, and JAZE.

Jaze is a new video streaming platform specifically for Jazz, Their stand was unmanned when I was covering the Start Ups but it sounds like a neat idea for Jazz fans.

For those that were there when we visited the next few pages are dedicated to them

FULIANTY AUDIO

Fulianty Audio are a Polish brand making a High End Headphone amplifier, but without being retro or old fashioned about it. It is handmade, hand finished and has a solid aluminium chassis with a Corten steel front panel, individually hand-made and finished. The headphone amp features class A triodes, OTL SE circuit (output transformerless and single-ended), P2P soldering installation (point-to-point), no global circuit feedback, a robust power supply, an anode voltage delayed switching system based on an electron tube, AC vacuum tube heating and there are only four components in the signal path. Fulianty use new old stock and carefully chosen valves from well-known manufacturers, fabricated during the golden age of vacuum tube production.

The Headphone Amplifier

Incredibly pure OTL SE P2P Headphone Amplifier
For Audio Enthusiasts & Music Lovers everywhere
The last Headphone Amplifier you will ever need

Pure Design Topology

- Class A triodes
- OTL SE circuit (output transformerless & single-ended)
- No global circuit feedback
- P2P soldering installation (point-to-point)
- Robust power supply with anode voltage delayed switching system based on an electron tube
- AC vacuum tube heating
- Only four components in the signal path

High-End selected audio components

- NOS (new old stock) carefully chosen from well-known manufacturers fabricated during the golden age of vacuum tube production
- Highly refined supporting components: resistors, capacitors, source-selector, potentiometer, sockets, induction components in the hi-end specification

Modern Design

- Solid chassis, built from non-magnetic aluminium parts fabricated by CNC with a powder-coated finish
- Corten steel front panel, individually hand-made and finished
